

PEGAS improves its End of Day Price Reference service

Dear Members,

We would like to inform you that PEGAS improves its End of Day (EoD) price reference service, and also adds a decimal to all its references prices as of 05.09.2017.

Improvement of the End of Day calculation

- For the sake of consistency, End of Day reference prices will not anymore take into account transactions on Saturday and Sunday contracts: EoD corresponding to the Week-end delivery days will only be computed using Week-end contracts transactions. Therefore the following contracts will be used to compute PEGAS End of Day: Day-Ahead, Weekend and Bank Holidays. This evolution only impacts NCG, GPL and TTF delivery area, for which the End of Day is currently computed taking into account Saturday and Sunday contracts.
- Introduction of End of Day Price Reference on ZTP: PEGAS will extend the calculation of the End of Day to the ZTP hub.

Thus, End of Day reference prices will be computed using the same methodology on the following hubs: TTF, NCG, GASPOOL, PEG Nord, TRS, ETF, CEGH VTP and ZTP.

Addition of a third decimal to all PEGAS reference prices and indices

As of 05.09.2017, all PEGAS reference prices and indices will be computed and published on 3 decimal points. End of Day and Settlement Prices are impacted by this modification, as well as Powernext existing and new indices: EGSI, DRP (discontinued in December 2017), WDRP, EGIX and Monthly Index.

Please do not hesitate to contact PEGAS Sales team if you have any question.

Yours sincerely,
