<https://www.ecc.de/blob/13110/70199cd7ce7a1919550aa48d2d8decd3/clearing-specification-data.pdf>

Publication Date: 25 June 2018

4. What is this product?

Type

Cash settled commodity derivative (option contract). Derivative under Annex I, Section C of MiFID II (Directive 2014/65/EU).

Objectives

A call option on futures is a financial derivative where one counterparty (the option writer or seller) sells to another counterparty (the option holder or buyer) the right to buy – by exercising the option – a future at the exercise (strike) price of the option at a specific date (exercise date). The buyer of the call option (option holder) obtains a long position in the option. The option offers the right, but not the obligation, to – by exercising the option – receive a long position in the corresponding future at the exercise (strike) price of the option at a specific date (option exercise date)

PEGAS Options are European options, whereby the option can only be exercised on the last trading day of the respective maturity. The times during the trading day at which an option can be exercised are set out in the Contracts and Spread between Contracts' Specifications detailed in Market Notices.

The buyer of an option contract is obliged to pay the price for the purchase of the right of an option (option premium) on the ECC Business Day after the purchase. The premium is credited to the seller of the option on the same day. The buyer and seller have opposing expectations of how the value of the underlying futures price will develop. Either market participant will experience a profit if their expectations materialize, and a loss if their expectations do not materialize.

In order to determine the gross profit or loss¹ at expiration of a call option long, first the breakeven price must be determined by finding the sum of the call option strike price plus the option premium paid. The gross profit or loss can then be calculated by subtracting the breakeven price from the underlying futures price at expiration and multiplying the result by the product-specific value of the underlying units per contract (contract volume)². The option profit or loss is zero when the underlying value of the future is equal to the strike price plus the option premium. The buyer of a call option long realises a gross profit if the value of the underlying future has increased above the value of the breakeven price, and a gross loss if the value is below the breakeven price. However the gross loss is limited to the value of the option premium paid. The profit and loss formulae at expiration of a call option long are as follows:

¹ The gross profit or loss is a customer's profit or loss before consideration of transaction fees, clearing fees, brokerage fees, tax and/or any other administrative expenses occurring in connection with the exposure to the relevant futures position.

² More information on product-specific contract volume values can be found in the Contracts And Spreads Between Contracts' Specifications in Powernext Derivatives Market Notices available under: <https://www.powernext.com/documentation>

Long Call Max. Loss = option premium paid

Long Call B/E = strike price + option premium

Long Call P/L = (underlying price – B/E price) * contract volume

A call option long open position can be closed at any time before the maturity date by selling the same option during the trading hours of the exchange. In the highly unlikely event that an orderly functioning of markets would no longer be guaranteed, in accordance with the Market Rules, Powernext has an extraordinary right to suspend trading or to terminate positions.

Futures contracts which are referenced as the underlying for PEGAS Options may include, but are not limited to:³

- The respective delivery period of the Gas Base Month, Base Quarter, Base Season or Base Calendar Year Future, that is named in the respective Option as underlying, for the corresponding market area.

Intended retail investor

This product is not designed to be marketed to a specific type of investor or to fulfil a specific investment objective or investment strategy. A retail investor should become familiar with the characteristics of this product to make an informed decision on whether or not this product fits their investment needs. If in doubt, a retail investor should contact their broker or investment adviser to obtain investment advice

Term of the Product

PEGAS options contracts have pre-set termination dates (maturities) according to each contract expiry which can be found in the Market Notices **Error! Bookmark not defined.** PEGAS options contracts terminate automatically on those dates.

5. What are the risks and what could I get in return?

Risk indicator

Summary Risk Indicator: 7

The Summary Risk Indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets.

We have classified this product as a 7 out of 7, which is the highest risk class. This is because the profits and losses of an option contract depend on the daily movements of the underlying futures market price for that contract. Options contracts have a materially relevant liquidity risk. In case of low market liquidity, you may not be able to close out your position at your intended price. This product does not include any protection from future market performance so you could lose some or all of your investment. Be aware of currency risk. Depending on the chosen product, payments will be made in a different currency; therefore the final return will depend on the exchange rate between the two currencies.

³ Information on different underlyings and maturities of options contracts can be found in the Contracts And Spreads Between Contracts' Specifications in Powernext Derivatives Market Notices, available under: <https://www.powernext.com/documentation>

Performance Scenarios

The following graph illustrates how your investment could perform. The graph presented gives a range of possible outcomes and is not an exact indication of what you might get back. What you get will depend on how the underlying future will develop. For each value of the underlying, the graph shows what the potential profit or loss of the product will be. Buying a call option long indicates that you think the underlying futures price will increase. Additionally, the potential for profit or loss of the option position depends highly on the way the position is used, e.g. options can be traded as a risk management tool to hedge other investments or as a stand-alone investment.

6. What happens if Powernext is unable to pay out?

Powernext operates trading platforms under French law for the conclusion of financial transactions between market participants. Powernext does not act as counterparty to its market participants with respect to transactions. All derivatives traded on Powernext’s market places are centrally cleared by European Commodity Clearing (ECC)⁴.

7. What are the costs?

Exchange one-off costs / transaction costs for entry or exit of the product

Powernext and ECC charge transaction fees which are charged for the execution of orders and the registration of trades. Transaction fees are paid by exchange trading participants. The transaction and clearing fees for this product are as follows:

Powernext Trading Fee	ECC Clearing Fee	Total
See price list ⁵	€ 0.002 per MWh	Depending on the trading fee

If retail investors do not have a contractual relationship in the form of membership with Powernext and/or ECC, further or associated costs may be charged to retail investors by the exchange trading participant, brokers or other intermediaries involved in the retail derivatives transaction. Powernext and ECC are not aware of the costs charged by intermediaries to the retail investors.

8. How long should I hold it and can I take money out early?

There is no recommended holding period for this product. Futures contracts can be held until expiration. Whether or not customers choose to do so will depend on their investment strategy and risk profile. Both, the buyer and the seller of a future can exit their exposure to a future as further described in Section 4, “Objectives”. Customers can roll forward their exposure in a future (at or before maturity) to match their investment horizon. To roll a future means to extend its maturity by closing the initial contract and opening a new longer dated contract with the same underlying. If you decide to roll forward or close the position, fees as described in section 7 apply.

9. How can I complain?

Retail investors should address complaints directly to the party with whom the investor has the contractual relationship in relation to the product. If the retail investors are Powernext trading participants, complaints should be addressed to: Powernext SAS, Market Operations, 5 boulevard Montmartre, 75002 Paris, France, or send via email to gas@powernext.com.

⁴ More information on Powernext’s clearing house, ECC, can be found on its company website: <https://www.ecc.de/ecc-en/>
