Autorité des Marchés Financiers

#### PRIIP ISIN

The ISINs for all PEGAS Options can be found on the ECC Website:  
<https://www.ecc.de/blob/13110/70199cd7ce7a1919550aa48d2d8decd3/clearing-specification-data.pdf>

**Publication Date:** 25 June 2018

### 4. What is this product?

#### Type

Cash settled commodity derivative (option contract). Derivative under Annex I, Section C of MiFID II (Directive 2014/65/EU).

#### Objectives

A put option on futures is a financial derivative where one counterparty (the option writer or seller) sells to another counterparty (the option holder or buyer) the right to sell – by exercising the option – a future at the exercise (strike) price of the option at a specific date (option exercise date). The buyer of the put option obtains a long position in the option. The option offers the right, but not the obligation, to – by exercising the option – receive a short position in the corresponding future.

PEGAS Options are European options, whereby the option can only be exercised on the last trading day of the respective maturity. The times during the trading day at which an option can be exercised are set out in the Contracts and Spread between Contracts' Specifications detailed in Market Notices.

The buyer of an option contract is obliged to pay the price for the purchase of the right of an option (option premium) on the ECC Business Day after the purchase. The premium is credited to the seller of the option on the same day. The buyer and seller have opposing expectations of how the value of the underlying futures price will develop. Either market participant will experience a profit if their expectations materialize, and a loss if their expectations do not materialize.

The gross profit or loss<sup>1</sup> at expiration of a put option long depends on the option strike price and the initial premium at which the option was bought. If at expiration of the put option the underlying futures price is lower than the strike price, the option is profitable and therefore worth exercising by the option holder. The total gross profit increases as the underlying futures price decreases and reaches the profit limit price of zero. Conversely, if the underlying futures price is equal to or higher than the strike price, the option is not worth exercising and therefore the gross loss is equal to the value of the option premium paid. The breakeven underlying futures price of a put option long can be found by subtracting the option premium paid from the strike price. The gross profit or loss can be calculated by taking the maximum of either the underlying futures price subtracted from the strike price, or zero, then subtracting the option premium

<sup>1</sup> The gross profit or loss is a customer's profit or loss before consideration of transaction fees, clearing fees, brokerage fees, tax and/or any other administrative expenses occurring in connection with the exposure to the relevant position

and multiplying by the product-specific value of the underlying units per contract (contract volume)<sup>2</sup>. The profit and loss formulae at expiration of a put option long are as follows:

Long Put Max. Loss = option premium paid

Long Put B/E = strike price – option premium paid

Long Put P/L = (MAX (strike price – underlying price, 0) – option premium) \* contract volume

A put option long open position can be closed at any time before the maturity date by selling the same option during the trading hours of the exchange. In the highly unlikely event that an orderly functioning of markets would no longer be guaranteed, in accordance with the Market Rules, Pownext has an extraordinary right to suspend trading or to terminate positions.

Futures contracts which are referenced as the underlying for PEGAS Options may include, but are not limited to:<sup>3</sup>

- The respective delivery period of the Gas Base Month, Base Quarter, Base Season or Base Calendar Year Future, that is named in the respective Option as underlying, for the corresponding market area.

**Intended retail investor**

This product is not designed to be marketed to a specific type of investor or to fulfil a specific investment objective or investment strategy. A retail investor should become familiar with the characteristics of this product to make an informed decision on whether or not this product fits their investment needs. If in doubt, a retail investor should contact their broker or investment adviser to obtain investment advice.

**Term of the Product**

PEGAS options contracts have pre-set termination dates (maturities) according to each contract expiry which can be found in the Market Notices **Error! Bookmark not defined.** PEGAS options contracts terminate automatically on those dates.

**5. What are the risks and what could I get in return?**

The Summary Risk Indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets.

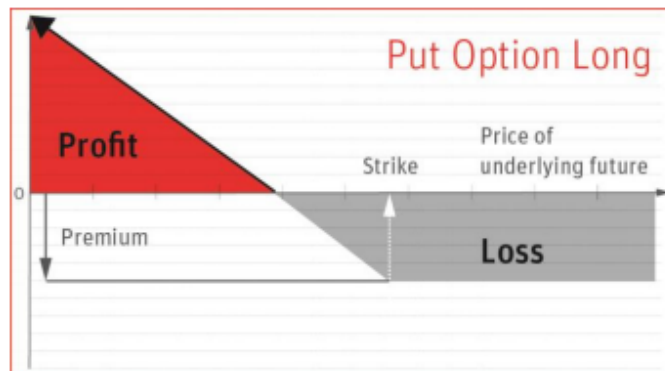

We have classified this product as a 7 out of 7, which is the highest risk class. This is because the profits and losses of an options contract depend on the daily movements of the underlying futures market price for that contract. In some circumstances you may be required to make further payments to pay for losses. The total loss you may incur may significantly exceed the amount invested. Options contracts have a materially relevant liquidity risk. In case of low market liquidity, you may not be able to close out your position at your intended price. This product does not include any protection from future market performance so you could lose some or all of your investment. Be aware of currency risk. Depending on the chosen product, payments will be made in a different currency; therefore the final return will depend on the exchange rate between the two currencies.

<sup>2</sup> More information on product-specific contract volume values can be found in the Contracts And Spreads Between Contracts' Specifications in Pownext Derivatives Market Notices available under: <https://www.pownext.com/documentation>

<sup>3</sup> Information on different underlyings and maturities of options contracts can be found in the Contracts And Spreads Between Contracts' Specifications in Pownext Derivatives Market Notices, available under: <https://www.pownext.com/documentation>

**Performance Scenarios**

The following graph illustrates how your investment could perform. The graph presented gives a range of possible outcomes and is not an exact indication of what you might get back. What you get will depend on how the underlying future will develop. For each value of the underlying, the graph shows what the potential profit or loss of the product will be. Buying a put option long indicates that you think the underlying futures price will decrease. Additionally, the potential for profit or loss of the option position depends highly on the way the position is used, e.g. options can be traded as a risk management tool to hedge other investments or as a stand-alone investment.

**6. What happens if Powernext is unable to pay out?**

Powernext operates trading platforms under French law for the conclusion of financial transactions between market participants. Powernext does not act as counterparty to its market participants with respect to transactions. All derivatives traded on Powernext’s market places are centrally cleared by European Commodity Clearing (ECC)<sup>4</sup>.

**7. What are the costs?**

**Exchange one-off costs / transaction costs for entry or exit of the product**

Powernext and ECC charge transaction fees which are charged for the execution of orders and the registration of trades. Transaction fees are paid by exchange trading participants. The transaction and clearing fees for this product are as follows:

Powernext Trading Fee	ECC Clearing Fee	Total
See price list <sup>5</sup>	€ 0.002 per MWh	Depending on the trading fee

If retail investors do not have a contractual relationship in the form of membership with Powernext and/or ECC, further or associated costs may be charged to retail investors by the exchange trading participant, brokers or other intermediaries involved in the retail derivatives transaction. Powernext and ECC are not aware of the costs charged by intermediaries to the retail investors.

**8. How long should I hold it and can I take money out early?**

There is no recommended holding period for this product. Options contracts can be held until expiration. Whether or not retail investors choose to do so will depend on their investment strategy and risk profile. A long option position can be closed by entering into a corresponding sales contract in the market on any trading day during the lifetime of the option and during the exchange trading hours. No penalties apply for disinvestment prior to maturity. If the retail client decides to close the position, fees as described in section 7 apply.

**9. How can I complain?**

Retail investors should address complaints directly to the party with whom the investor has the contractual relationship in relation to the product. If the retail investors are Powernext trading participants, complaints should be addressed to: Powernext SAS, Market Operations, 5 boulevard Montmartre, 75002 Paris, France, or send via email to [gas@powernext.com](mailto:gas@powernext.com).
